

Electronic components are found in nearly all electrical and electronic devices and are indispensable for their proper function. TDK is a leading manufacturer of these key products.

We are looking for the following for the expansion of our Piezo and Protection Devices Business Group at our facility based in Deutschlandsberg, Austria, for immediate start

Development Engineer (m/w/d)

Your duties

- Planning and implementation of material development projects for multilayer varistors
- Cooperation with internal technical departments and marketing as well as with external research institutes
- Technical documentation, development and characterization of ceramic materials and manufacturing processes
- Assumption of management tasks planned

Your profile

- Completed course of study (TU, UNI, MUL); specialization in materials science, chemistry, physics or similar
- Several years of professional experience in material development is required
- Relevant skills in the synthesis of ceramic materials
- Experience in electrical characterization and familiarity with varistor materials is beneficial
- Creativity, reliability, communication skills and resilience
- English spoken and written

Salary: Starting from € 3.900 gross per month (14 times) with the capacity for an increased salary depending on your experience, skill and competence

We want to get to know you!
